Georgia Department  
of Audits & Accounts

**Greg S. Griffin**  
State Auditor

March 6, 2025

Honorable Chuck Hufstetler  
Chairman, Senate Finance  
121-C State Capitol  
Atlanta, GA 30334

SUBJECT: Fiscal Note  
Senate Bill 266 (LC 50 1075)

Dear Chairman Hufstetler:

The bill would allow the board governing the Georgia Higher Education Savings Plan (GHESP) to modify the maximum account balance. It would also increase the maximum per-beneficiary contribution that is allowed as an income tax deduction from \$4,000 to \$5,000 for single or separate filers and from \$8,000 to \$10,000 for joint filers. The bill would apply to taxable years beginning on or after January 1, 2025.

### Impact on Revenue

Georgia State University’s Fiscal Research Center (FRC) estimated that the bill would decrease state revenue as shown in Table 1. The appendix provides details of the analysis.

**Table 1. Estimated State Revenue Effects of SB 166 LC 50 1075**

(\$ millions)	FY 2026	FY 2027	FY 2028	FY 2029	FY 2030
State Revenue Impact	(\$2.49)	(\$2.49)	(\$2.49)	(\$2.50)	(\$2.50)

### Impact on Expenditures

The Department of Revenue would be able to implement the provisions of the bill with existing resources.

Respectfully,

Greg S. Griffin  
State Auditor

Richard Dunn, Director  
Office of Planning and Budget

GSG/RD/mt

### Analysis by the Fiscal Research Center

Section 2 of LC 50 1075 proposes to replace the fixed cap on a GHESP account balance—above which further contributions are not allowed—with an amount established by the GHESP board of directors. This provision would have no impact on Georgia revenues.

Section 3 of the bill would increase the maximum per-beneficiary contribution allowed as an income tax deduction from \$4,000 to \$5,000 for single or separate filers and from \$8,000 to \$10,000 for joint filers. The effects of these increases were analyzed using a microsimulation model on the tax year (TY) 2022 data from DOR. Based on these data, approximately 47 percent of filers claiming GHESP deductions were deducting an amount consistent with having reached the maximum—that is, a multiple of \$4,000 for single or separate filers or a multiple of \$8,000 for joint filers. For these filers, it is assumed that the amount of actual plan contributions is sufficient for the amount deducted to increase to the new per-beneficiary caps. For filers deducting amounts below the per-beneficiary caps, no increase in deduction is assumed because the filer is apparently already deducting the full amount of their actual plan contributions.

In aggregate, the total amount of additional GHESP deductions allowed would have been \$47.1 million in TY 2022 had the proposed changes been in effect then. The microsimulation model calculated the difference between current-law (TY 2024) taxable income, accounting for all other deductions allowed under current law, and taxable income net of the additional GHESP deductions under the proposed law, resulting in a net reduction in taxable income of approximately \$46.0 million.

The net change in taxable income is assumed to grow based on the population of dependent children. U.S. Census population estimates for children aged 0–19 were used to estimate growth between 2022 and 2024. The Office of Planning and Budget’s population projections (vintage 2024) for the same ages were used to grow this revenue impact through TY 2030. Based on these data and projections, the population of dependent children is expected to grow by 0.13 percent on average from 2022 through 2030, with higher growth in earlier years and slower expected growth after 2026.

The flat tax rate of 5.39 percent has scheduled decreases of 0.1 percent each year if certain look-forward and look-back conditions are met. Given the uncertainty of the conditions being met for any given year, Table 2 below provides tax year revenue effects assuming a constant 5.39-percent rate. Scheduled rate reductions, if triggered, would further reduce the revenue cost from the period such reduction is effective.

**Table 2. Estimated Additional GHESP Deductions**

(\$ millions)	TY 2025	TY 2026	TY 2027	TY 2028	TY 2029
GHESP Deductions	\$46.16	\$46.22	\$46.29	\$46.35	\$46.41
PIT Revenues at 5.39%	\$2.49	\$2.49	\$2.49	\$2.50	\$2.50

The tax year estimates in Table 2 are converted to fiscal year revenue impacts for Table 1 under the assumption that the impact on collections would be realized primarily when taxpayers file returns claiming the deduction; thus, each tax year’s impacts revenues for the fiscal year beginning July 1 of the given tax year.
